

Product Fact Sheet

The Bottom Line:

- Start every day with every computer secure, compliant, and ready for business
- Enforces compliance with company specific policies and with mandated policies
- Detects non-compliance, synthesizes a remediation, and fixes the problem automatically
- Significantly reduces support costs while creating a near continuous level of compliance and audit readiness
- Eliminates risk by eliminating known vulnerabilities

COMPLIANCE AND CONFIGURATION MANAGEMENT

COMPLIANT, CONFIGURED AND READY FOR BUSINESS

What would it be worth to a business or government agency to know that at the start of every business day, endpoint machines across the organization are audit ready and properly configured for business? What is the value of knowing that controls and policies that span security, power management, specific configuration requirements for specific software deployments, and federal and industry mandates are all enforced on a daily basis without human intervention?

With Triumphant, every machine is effectively audited every day, and if a non-compliant condition is detected, the problem is analyzed, an appropriate remediation is synthesized, and the machine is automatically remediated to restore it to compliance. This results in a near continuous level of compliance with significantly reduced support costs, coupled with unparalleled visibility into the audit readiness of endpoint computers. Triumphant is also extremely flexible, enabling users to check machines against organization specific policies and configurations, or pre-defined policies for federal (i.e. FDCC) or industry specific mandates (i.e. PCI).

Product Benefits:

- The analytics engine detects non-compliance or mis-configuration, synthesizes a remediation, and applies that remediation. Automating this process eliminates the human intensive side of the process, thereby speeding the process from discovery to repair and eliminating support costs.
- The remediations created for detected problems are discreet and reversible and do not require the creation and distribution of scripts or other manual processes.
- Performs these tasks with zero or near-zero visibility to the user.
- Provides centralized visibility and control into endpoint computer configurations.
- Provides extremely powerful and flexible control for tuning policies for large groups, smaller workgroups, or individual PC's.
- Comes out of the box with easily customizable policy templates with optional specialty templates for FDCC compliance, PCI compliance, and Green IT Power Management.
- Patent-pending donor technology allows Triumphant to restore missing software components by obtaining the components from other machines on the network.
- Delivers extensive, actionable reporting to provide critical insight to compliance status and audit readiness from the machine level to executive summary views.
- Interfaces with other System Management tools so that issues can be automatically included into trouble ticketing processes.
- Leverages Security Content Automation Protocol (SCAP) content to perform vulnerability assessments in applications and the operating system.
- ROI is rapid and demonstrable, with most customers seeing a return on the cost of the software in less than six months.
- Implementing Green IT Power Management will greatly accelerate the ROI and, in fact, the savings from reduced power consumption will cover the costs of the software before other returns are considered.

Product Fact Sheet

Compliant, Configured and Ready for Business

- Maintains endpoint computers in an audit ready state on a daily basis
- Enforces broad policies or specific mandates and policies such as:
 - FDCC Compliance
 - Green IT Power Management
 - Configuring for Broad Deployments
- Actionable reports provide an unmatched view as to the readiness of the endpoint computer environment
- Effectively removes unauthorized applications that represent needless support costs and unnecessary organizational risk

Triumfant, Incorporated

301.917.6299

COMPLIANCE AND CONFIGURATION MANAGEMENT

With Triumfant, businesses and government agencies can start every business day with their endpoint machines compliant and properly configured. Triumfant's unique capability to detect unexpected changes and conditions on over 200,000 attributes means that Resolution Manager can detect compliance and configuration issues even when there is not a specific policy in place for a given attribute. Triumfant's unique patent pending analytics perform comparative analysis against endpoint computer populations to determine if there is a normal configuration value for thousands of attributes. Automating the determination of normal configurations for those attributes not addressed by policies greatly extends the reach and range, and ultimately the benefit, of the configuration management process.

Product Advantages:

- Triumfant scans every computer, every day and collects and analyzes over 200,000 individual attributes from each computer. The result is a quantum leap in diagnostic range and accuracy that allows Triumfant to detect mis-configurations or non-compliant states that other tools miss.
- The patent pending analytical engine eliminates the need for human intervention and dramatically reduces the time required to remediate problems by automating the process of diagnosing the problem, determining the proper remediation, and performing the remediation
- Information about discovered problems and the associated remediation are stored, helping the Triumfant platform recognize patterns that cause potentially reoccurring problems in order to prevent further occurrences.
- Recognition filters can be manually constructed to help interpret detected problems and shape the eventual remediations. This allows the administrator to capture and leverage organizational knowledge to be used in the remediation process.
- Remediations restore affected machines beyond simply deleting or neutralizing the cause of non-compliance. Triumfant holistically restores the affected machine to its state before the problem occurred.
- Policy-driven implementation increases flexibility and control and provides very discreet tuning of automated remediation based on specific configuration issues.
- Resolution Manager is able to readily remove unauthorized software from endpoint computers, proactively eliminating a source for potential incidents, ensuring that there is no exposure to improper licensing, and potentially reducing licensing costs.
- An actionable view into endpoint compliance and configuration that is unprecedented in the industry is made possible by a wide range of standard reports, a user interface to create custom reports, the ability to distribute reports to executives and stakeholders, and the power to export reports to integrate the information into business documents.

About Triumfant

Triumfant offers unique analysis software that automatically discovers, diagnoses and remediates unexpected changes and conditions on endpoint computers and servers, ensuring that these computers are secure, compliant, audit ready, properly configured and ready for business. Triumfant scans every computer every day, helping organizations to minimize security risks, reduce IT support costs, ensure compliance and increase quality of service. To learn more about how Triumfant can help your organization, please call us at 800.267.2190 or visit us at www.triumfant.com.
