

For Immediate Release

Triumfant Provides Federal Government Customers Special Offer on New Green IT Power Management Option Pack

Green IT Solution, Now Available at \$2 per Desktop Through September 30, 2008, Provides Immediate ROI

Rockville, MD – September 16, 2008 – Triumfant®, the industry leader in proactive PC monitoring and control software, today announced a special offer for federal government customers on Triumfant's Green IT Power Management™ solution which helps organizations save energy costs and the environment. From now until September 30th, federal subscribers to Triumfant's Power Management solution can receive a special price of \$2 per desktop for the first and second years of a new contract purchased through Triumfant's pre-competed government-wide contract vehicle.

“In a 10,000 workstation environment where machines are left on all the time, the annual cost for electricity can reach more than \$13,000,000,” said John Prisco, CEO of Triumfant. “Using Triumfant Green IT Power Management solution, organizations can save upwards of \$1,000,000 per year in electricity bills. And now, with this special offer, the return on investment is nearly instantaneous.”

The Green IT solution extends the capabilities of Triumfant's award-winning Triumfant Resolution Manager™ solution that automatically identifies and fixes unwanted changes in desktops, laptops and servers before they create security and compliance risks. Triumfant Green IT Power Management reduces computer power consumption without impacting computer use or administration. Based on an organization's energy management policies, the solution automatically detects when a PC is out of compliance and automatically adjusts it to the correct power configuration settings, saving significant amounts on electrical and cooling bills. Users no longer need to keep their computers on at all times so that IT departments can conduct maintenance during off-hours, and IT administrators can easily maintain optimal settings across the IT environment. The software includes a wake-on LAN feature which can automatically power up designated groups of computers.
