Triumfant Introduces New Green IT Power Management Option Pack

New Solution Saves Money, Energy and the Environment by Automatically Enforcing Power Management Policies

Rockville, MD – August 19, 2008 – Triumfant®, the industry leader in proactive monitoring and control software, today announced the Triumfant Green IT Power Management™ Option Pack to help organizations save energy costs and the environment. The Green IT Option Pack extends the capabilities of the company's award-winning Triumfant Resolution Manager™ solution that automatically identifies and fixes unwanted changes in desktops, laptops and servers before they create security and compliance risks, become service desk calls and adversely impact user productivity.

The Triumfant Green IT Power Management Option Pack reduces computer power consumption without impacting computer use or administration. Based on an organization's energy management policies, the solution automatically detects when a PC is out of compliance and automatically adjusts it to the correct power configuration settings, saving significant amounts on electrical and cooling bills. Users no longer need to keep their computers on at all times so that IT departments can conduct maintenance during off-hours, and IT administrators can easily maintain optimal settings across the IT environment.

In a 10,000 workstation environment where machines are left on all the time, the annual cost for electricity can be up to \$13,300,000, depending on the cost per kilowatt hour of electricity in the United States and the average amount of electricity consumed by desktop computers and monitors. Using Triumfant Green IT Power Management, organizations could save upwards of \$1,000,000 per year in electricity bills. Total savings could be even greater when factoring the associated reduction in the cost of electricity for air conditioning and the tax benefits linked to energy conservation. With the cost of electricity continuing to rise, these savings are likely to grow significantly over time.

Key features of the Triumfant Green IT Power Management Option Pack include:

- Policy-driven management of Windows XP and Windows Vista power configuration settings that enables IT administrators to easily establish and maintain a desired power scheme or plan across a distributed computing environment.
- Policy-driven power state management that automatically sets computers to low or no power usage during scheduled intervals, i.e. non-business hours.
- A Wake-on-LAN capability that allows computers that have been shut down to be automatically returned to a ready state so that scheduled maintenance activities can occur.

- A rich set of reports that allows administrators to measure the results of power management policies and to identify and remediate computer configurations which are not compliant with power management policies.

“The costs of non-compliance with power management policies can be just as high as the costs associated with non-compliance with security or regulatory policies; that’s why we’ve introduced the Green IT Power Management Option Pack,” said John Prisco, Triumfant CEO.

“Organizations can now easily add power management policies to their Triumfant platform to continuously monitor and control their PC environment and ensure compliance with all critical policies. And the cost of the Green IT Option Pack is far less than the cost of similar stand-alone solutions.”

The Triumfant Green IT Power Management Option Pack is currently available and includes configurable filters, policy templates and reports. To download the Triumfant Green IT Power Management white paper visit the Triumfant Resource Library at:
